

NASH 2BE Inlet Manifold Upgrades

A NASH 2BE Inlet Manifold gives you increased testing ability and service access

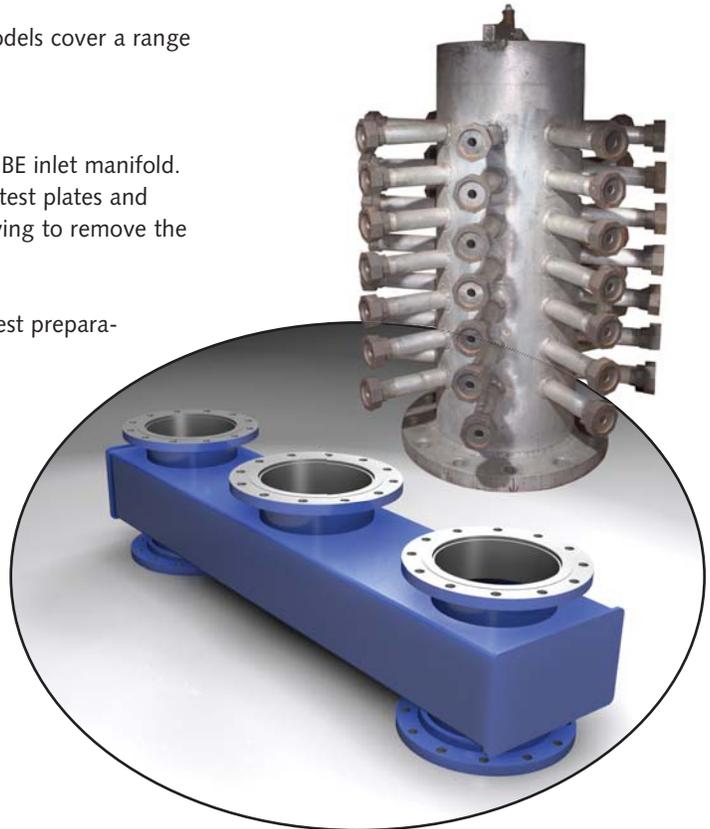

2BE Inlet Manifolds

Available for the single stage, NASH 2BE3 pumps, these models cover a range of 60-1050 HP and have capacities to 19,000 ACFM.

The Benefits of the New 2BE Manifold

This aftermarket option is an improvement on the current 2BE inlet manifold. It includes two additional flanges designed to receive Nash test plates and perform orifice testing to gauge pump capacity without having to remove the manifold. The upgrade features:

- Manifold swap out program for minimal downtime
- No need to remove manifold for testing, reducing the test preparation time and costs
- Increased performance test efficiency
- Better maintenance planning
- An extra location for optional accessories

Among the most reliable pumps in the industry, Nash pumps still need regular maintenance. Pump capacity and orifice testing help determine optimal service frequency, and the new 2BE manifold allows for just that.
